

UMass Schedule Change Threatens Jan-term

By LOREM IPSUM
Staff Writer

ADMINISTRATIVE STAFF at the University of Massachusetts are currently exploring a revision to their spring schedule that could possibly affect Hampshire and the other liberal arts colleges in the Valley. The proposal is to begin their spring semester early, perhaps in mid-January, and to end early as well. The UMass administrators promoting the idea feel their current schedule, which places their graduation ceremony later than that of similar institutions, disadvantages their students when it comes time to compete for jobs and summer internships. *This is sample text.*

Hampshire students rely on classes at

the other four institutions more than students at any other college in the area, and a large number of students each semester take classes at UMass. In its promotional material, Hampshire brags about the number of courses offered each semester in the Pioneer Valley.

And it's true: With five institutions offering enrollment options for everyone, Hampshire stands out from many of its competitors by the sheer number of classes it is able to offer—primarily through the Five Colleges—while still maintaining its identity as a small liberal arts college.

But while Amherst, Mount Holyoke, and Smith are an important part of this, UMass offers *many times more* classes than the other four colleges put together.

Hampshire's Dean of Faculty and Professor of History Aaron Berman explained:

January term is a very important time period. It is "traditionally and historically important in the sense that it was one of the original innovations of the college. And in recent years, we have had a very rich January term, probably in some ways the richest January term in the Valley." Maintaining a variety of January term options is a priority for Hampshire.

Aside from classes, January term is important for more administrative issues. Faculty members often use Jan-term as a time for writing evaluations. *"It poses a little bit of an administrative challenge, but it's nothing that we can't cope with,"* Berman concluded. 🌿

Typeface Designed for School Newspaper

By DAVID JONATHAN ROSS
Staff Writer

THIS TYPEFACE is part of a semester-long information design project on typography and newspaper design that will culminate in the redesign of Hampshire College's official student newspaper, *The Climax*.

When designing this font, I tried to consider the less-than-ideal conditions that exist in newspaper printing, especially at an amateur level. Consequently, the contrast decreased and the serifs became slabbier as the design matured. At the same time, I attempted to create an open and pleasing design

that reflects the institution's "experimental" mission.

The headlines of these "articles" are set in a bolder, sharper headline font intended for display matter. It is still pretty rough and needs more work than I ever have time for this semester.

The tree glyph that marks the

end of articles in *The Climax* is an adaptation of the college's original logo. Although it is no longer used by the college, I am working on making this part of the newspaper's branding.

This showing mimics the layout in which this font will eventually be set. The body text is set in 9.5/13.5 DJR Climax Text . 🌿

Hampshire Plans Residential Community

Text set in 10/14 pt. DJR Climax
Text 12.4 on November 12, 2006
by David Jonathan Ross.

LOOK INTO Veridian Village shows a compromise between what the campus wants and what the campus needs. President Hexter's memorandum, sent out on September 21, announced the decision of the Hampshire Board of Trustees to go forward with their plan to create a residential community on Hampshire property. To many students, this announcement came out of the blue. The memorandum was fairly brief, leaving many questions entirely unanswered. In search of some of these answers, I went and talked to Larry Archey, the director of Campus Planning & Support Services.

For those readers who have not taken the time to look over the President's memorandum, it reads:

The planned residential community will consist of approximately 120 homes and will be located on the east side of Rt. 116, across from Hampshire's main campus. The area between the driveways of the Admissions office and the main entrance is essentially where this plot of land lays. The Warner house will not be demolished or taken over by the development, though for wet-land preservation purposes the main entrance to the development will run through the existing entrance serving the Warner house and the hay fields beyond. Much of the land in question is already deforested and used agriculturally.

Plans for this development have been in the works for years, and it seems that the administration has gone to great lengths to research the market they are targeting. They used surveys to make sure there was interest in the project and conducted studies to find out what sort of development might best suit Hampshire.

RESEARCH ANALYSIS

The research has shown that the people who will most likely be living in this development are the over-40 crowd. This does not necessarily mean all retirees, and Veridian Village won't be an assisted living community. The hope of the administration is that people living in Veridian Village will be interested in interacting with the college and the students. If looked upon as a resource, this might be a great boon to Hampshire, potentially offering opportunities for inter-generational learning.

The administration has many vague ideas regarding the possible interaction between students and the residents of the development. What is clear is that they want interaction between the two communities, but that the level of actual interaction will depend on the residents and students. Residents will have a commons with a library and classrooms, among other amenities, and may also have access to some of Hampshire's courses and the library.

This development is not designed to drain Hampshire resources such as Physical Plant or Public Safety. The members of the development will pay fees to their own condominium association to take care of those sorts of matters.
