

“Rage against the machine”
isn’t such a great thing to do
when it’s your life-support system.

In the interest of increasing legibility, I’ve altered the proportions a bit. Now the ascenders are taller and the b, p, h, n, m, d, q are thinner. Oh, and I gave the g some white space.

Now I’ll put up some sample text. (This happens to be a continuation of the story I started in the last sample.)

After a while I checked my watch. I had been hiking about ten minutes. I was getting really tired and my feet were numb. I was trying to think whether it was at all possible that I was in the wrong place, when I was blinded as the forest opened up into a broad white expanse. It took a minute for my eyes to adjust to the stark brightness. At first blarily and then more clearly, I saw a black dot

in the center of the field. It was a man, just standing there. Cautiously, I walked towards him. He was wearing a suit and holding a briefcase. He didn’t move at all and there was no expression on his face. There weren’t even any footprints leading up to where he was. He didn’t say a word until I stopped ten feet away from him.

And, of course, some pangrams/metagrams:

Incredibly, he makes a major life-change! For example: I’ll
require the system to have two sizes.

New job: x Mr. Gluck’s hazy TV, PDQ!

And that’s about all I’ve got for this one. Do you reckon I should make the top serif on lowercases like i and n go farther left? Hey, and here’s some other stuff.

The @ has a taste of the italics, but it’ll look better once I start them.
