Possible solution; This behavior is appropriate. The Windows Vista driver attempts to maintain the association to the wireless router/AP over power state transitions (such as hibernate). If the computer resumes its normal state from standby or hibernation before the wireless router/AP times out and disconnects, you are still connected to the network and there is no need to provide your user name/password. Problem or symptom; With my Windows Vista based computer, I cannot connect to a wireless router/AP that requires LEAP authentication.
