

Amarantino ExtraLight

By António Fonseca

Amarantino ExtraLight has been developed over a period of 10 months (January to October 2008) as a sans serif versatile family with clean visual presence. The family is still in development and it will be formed by 5 weights (ExtraLight, Light, Regular, Bold, ExtraBold) and italics designed to communicate confidence and authority.

As always existing designs have often been the source of inspiration for the creations of new ones. Amarantino is no exception and similarities can be found in the Sebastian Lester Soho™ typeface. My goal was not to copy but respect this source and turn my creation into something unique and with personal flavour.

The name Amarantino comes from the natural born from the city of Amarante in Portugal. The author is an Amarantino.

Amarantino is suitable for a variety of applications including medical, finance, transport, culture and high tech industries.

[illegible]

Charles Darwin's *On the Origin of Species* (published 24 November 1859) is a seminal work in scientific literature and arguably the pivotal work in evolutionary biology.[1] The book's full title is *On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life*, while for the 6th edition of 1872 the title was changed to *The Origin of Species*. [2] It introduced the theory that populations evolve over the course of generations through a process of natural selection. Darwin's book was the culmination of evidence he had accumulated on the voyage of the *Beagle* in the 1830s and expanded through continuing investigations and experiments after his return.[3]

Polski O POCHODZENIU GATUNKÓW

O pochodzeniu gatunków (On the Origin of Species) - praca naukowa Karola Darwina opublikowana w 1859. Darwin zawarł w niej podstawy swojej teorii ewolucji, przez co książka ta stała się jedną z najważniejszych prac w historii nauk przyrodniczych w ogólności.

Pełny tytuł dzieła brzmiał O powstawaniu gatunków drogą naturalnego doboru czyli o utrzymywaniu się doskonalszych ras istot organicznych w walce o byt (On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life), jednak w 6. wydaniu z 1872 roku tytuł skrócono do The Origin of Species.

W O pochodzeniu gatunków Darwin wysunął teorię o ewolucji gatunków w procesie naturalnej selekcji. Książka gromadziła zebrane przez niego na przestrzeni lat, głównie podczas jego podróży statkiem Beagle w latach 30. XIX wieku, dowody na istnienie doboru naturalnego.

Română

ORIGINEA SPECIILOR

Originea speciilor prin selecție naturală sau păstrarea raselor favorizate în lupta pentru existență (în engleză *On the Origin of Species by Means of Natural Selection, Or the Preservation of Favoured Races in the Struggle for Life*) este o carte scrisă de Charles Darwin, apărută în anul 1859.

Baza materialului pentru cartea Originea speciilor a fost adunată în călătoria efectuată în jurul lumii pe vasul „Beagle” între 27 decembrie 1831, când corabia, încărcată până la refuz, a ridicat ancora din Golful Plymouth și 2 octombrie 1836, când s-a întors, după aproape 5 ani, din nou în Anglia.

După sosirea din expediția în jurul lumii, întreaga energie a lui Charles Darwin este concentrată asupra strângerii materialului necesar lămuririi problemei originii speciilor.
