Wikipedia

A monospaced font is a font whose letters and characters each occupy the same amount of horizontal space. This contrasts with variable-width fonts, where the letters differ in size from one another, as do spacings in between many letters.

Even though computers can now display a wide variety of fonts, the majority of IDEs and software text editors employ a monospaced font as the default typeface. This increases the readability of source code, which is often heavily reliant on distinctions involving individual symbols, and makes differences between letters more unambiguous in situations like password entry boxes where typing mistakes are unacceptable.
