

I have taken it upon myself to design a smallcaps version of the OFL licensed Gentium font.

For copyright reasons, it is called GsmCaps for now.

I also made a semi-sans serif version of Gentium, called GsemiSans.

Both were really learning processes for me, and I plan to use them for an upcoming project. I may submit them to SIL, I don't know yet.

Thanks for any comments and criticisms; I am a complete beginner, with no formal training. But I just love typography!
