

Fly High Jawi by QalamBartar!

Dropping dots + marks, Jawi script has virtually 19 dynamic letterforms:

- One joins none, but sometimes can go up or down + across the preceding letter.
- Fourteen (14) Joiners (Green) join smoothly/appropriately through tails that shrink and expand to terminate words, clockwise (CW) or counterclockwise (CCW). Like T, each clockwise-terminating takes One + Only unchanging letterhead. @ is the only letter with 3 forms. Which CCW-terminating takes 2 forms?

T	@	3CCWT			9 Clockwise-Terminating Joiners									Position
ط	ه	ع	ح	م	ی	ب	ن	ف	ق	س	ص	ک	ل	Final after Blue
ط	ه	ع	ح	م	ی	ب	ن	ف	ق	س	ص	ک	ل	Final after Green
ط	ه	ع	ح	م	ی	ب	ن	ف	ق	س	ص	ک	ل	Mid Two Green
ط	ه	ع	ح	م	ی	ب	ن	ف	ق	س	ص	ک	ل	after Space or Blue

- Four (4) Right-only Joiners (Blue) that join the Green coming before, but not after them.

Farsi	Jawi	Jawi	L+A	4 Right Joiners				If preceded by
فارسي	عربي	جاوي	لا	ر	و	د	ا	Blue or space
قلم برتر	حروف	سلام	لا	ر	و	د	ا	Green

See how @+Kaf

1. Curve Up to Alif and Dal
2. Atop Yeh & Meem
3. Curve down to Ra
4. Line to H, Jeem & Waw
5. Atop H & Jeem

Windows + MAC are compelled to fly high Jawi by QalamBartar (QB), a tool built by MaryamSoft for those in search of little, powerful and affordable alternative that does not need more than Notepad + Wordpad or TextEdit. With its dynamic rich fonts, QB is a must-have for schools, (e)publishers and graphic designers.

Learn QalamBartar by Doing. It's so easy!

Run QB + Wordpad or TextEdit, choose a font that begins with (w_ or wm_), type a phrase, cursor across + back it and watch the fast appearing and disappearing Selection Helper (SH).

To always show SH, click on QB's icon > Hit "Typography Settings" (Fig below) > Tick Off the highlighted box (opposite Fig).

>>>>

Back to Typography Settings > Off/On the 2 ticked boxes to hide/show these 2 panels:

1. Control Panel (CP)
Three radio buttons,
to target:

(.) Nothing

(.) Letter = [Alt]

(.) Dots + Mark

Arrows = Arrow Keys

■ Undo = [Alt] + [Del]

◀▶ Expand/Contract

¿? = Cycle through
Alternatives

2. Dot+Mark Gun DMG
Above / Below

- By means of DMG, as far as the space allows, dots + marks can be shot above + below (half) joiners written in QB font without dislocating them as happens otherwise with non-QB fonts. DMG does not DaMaGe joiners written in QB font.
- By means of the Control Panel, more can be done. Let's explore it step by step:

1. Target any letter, hold [Alt] and hit Arrows to move it up + down the baseline and across + back the word.

کتاب رتبی دوریان دوریا

2. Target Clockwise-Terminating Green and hit ◀▶ to expand it, then target the beginning of the following word to move it across the expanded letter.

چردیق جاوی . فرض عین

3. Target Meem, H or @ then hit ¿? for alternatives. Similarly target Kaf and hit ◀▶ or ¿?.

السلام علیکم وعلیکم أهلاً وسهلاً سهلاً سهلاً

4. Target @ or H then hit ¿? to do/undo shouldering of the preceding Joiners.

5. Target Meem then hit ¿? to make the preceding Joiner do/undo sheltering.

Spot the differences!

مسجد . محمد . محمد . محمكة . شهید . هجري . شمسي
مسجد . محمد . محمد . محمكة . شهید . هجري . شمسي

Note: Shouldering/Sheltering is self-explanatory but it depends on the default set to the font by design. Different fonts have different defaults.

6. Target a dotted letter and press [Ctrl]+ [Alt] + any Arrow key once in order to separate the dot(s) from the letterform first. Then, if required,

- Remove the separate dot(s) by hitting [Delete] or [Backspace].
- Color and size the separate dot(s) by changing the font attribute.
- Shoot more dots by means of DMG
- Turn the horizontal pair of dot (..) to vertical (:) by hitting ¿?,
- Accurately position the separate dot(s) by holding [Ctrl] + [Alt] + hitting Arrow keys.

حروف عربية حروف عربية

7. Target any mark, then

السَّلامُ عَلَيْكُمْ أهلاً وسهلاً

- Accurately position it by holding [Ctrl] + [Alt] + hitting Arrow Keys.

- Color and size it by changing the font attributes.
 - Shoot one or more marks by means of DMG
 - Remove it by hitting [Delete] or [Backspace]
 - Slant (/) + (//) by hitting ◀▶ or ¿?
 - Elongate or shorten Fatha (/) + (//) by hitting ◀▶ or ¿?
- P/S. By default, wide Fatha (/) + (//) are set above wide letters.

8. Select a phrase and undo QB changes by hitting ■ or pressing [Alt]+[Delete] .

Word + Inword Spacings

Which word is easier to read?

In-word spaces: Two Blue Right-Only Joiners (R and Z) create gaps within words. These gaps vary in width with the variation of the letterforms, causing unpleasant irregularities that must be harmonized. QB automatically harmonizes such gaps, and repositions the dots of the surroundings (if any) wherever necessary.

Word-spaces : Jawi words can go without spaces; one would simply understand where a word ends and the next one starts; i.e. most letters reflect their positions. As space is inevitable in the world of publishing, and evenly spaced Jawi is impossible, it is recommended to find and replace all the spaces after R & Z with half spaces.

Export Artwork Asis, Image or Vector

- Asis to InDesign or Office applications simply by copy + paste.
- As eps, emf, png or bmp image by pressing [Alt]+[C] then clicking the highlighted button after choosing type, color and size
- As crisp, clean and scalable vector (svg) simply by dragging and dropping the captured image into the target application such as Freehand, Illustrator, PhotoShop or CorelDraw.

This tool and the variety Kashidas makes QB appealing to calligraphers too.

وَعَلَيْكُمْ السَّلَامُ

Programmable Keyboard

QB > Keyboard > hit the key then the corresponding character of choice. In this way, a researcher can assign his or her own keyboard according to the letter frequency of his/her dictionary; i.e., the higher the letter frequency, the more accessible the key.
