A is for the alphabet. The alphabet gave us the culture. And before culture came the abstract thought, and that abstract thought enabled man to ascent from a hunter gatherer to a cultivator of fields and a breeder of animals. From the abstract thought came pictures. The pictures evolved into signs. The signs evolved into letters. The letters evolved into the alphabet. And the alphabet made us able to pass our knowledge to our descendents. That ability gave us the world that we have today.
